How To...
Secret Notes

Materials

Paper
Pencil
Substitution Table

Procedure

1. Begin by writing your message.

2. Use the substitution table to encrypt your message. Each letter is substituted for the letter directly below it in the substitution table.

3. Pass your note to a friend. Can they read it?

4. Now have your friend use the substitution table to decrypt the message. They will need to find each letter of the note in the bottom row of the substitution table and replace it with the letter directly above it.

5. Continue replacing letters until the entire message is decrypted.
